## Announcement of change in W-NK Wet Gas Meters

Thank you very much for your continued patronage.

The 1kPa manometer is attached to our W-NK series of Wet Gas Meters. However few of our users use it therefore we have decided that starting from April 2016 1kPa manometer will be option.

Also, the W-NK series has been divided into two types, A-type and B-type. From April 2016 they will be unified into the B-type. For those of our customers using the A-type, we would like you to take the increased quality and corrosion resistance the B-type offers into account.

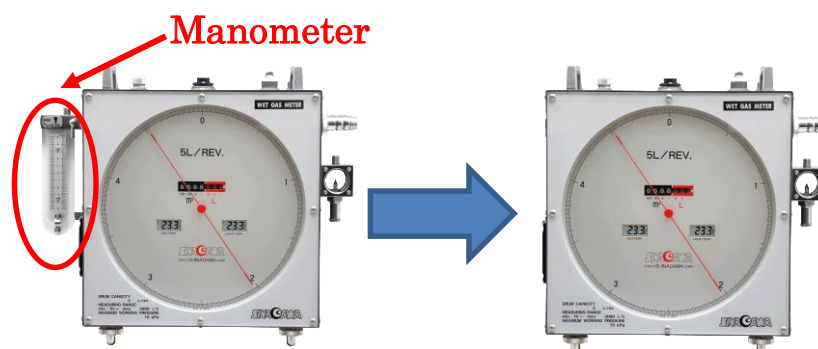

※A-type will be discontinued when the parts will be out of stock.

We will continually strive to make our products meet our customers' demands, we appreciate all your feedback.

Best Regards,

Shinagawa Corporation
